

MULTI-HEAD MACHINES

STECK HAVE DEVELOPED A RANGE OF MULTI - HEAD
DIMENSION DEPOSITORS TO SUIT VARIOUS CONVEYOR LAYOUTS

FOUR HEAD DIMENSION DEPOSITOR

A mid level fully automatic four head Dimension depositor complete with no container and no fill system. The machine has an extended yet compact nozzle frame assembly to save space on a conveyor system. Specifically designed for a platen type conveyor, the machine can be used with any combination of heads and can deposit as a single, twin, triple and four across to suit production requirements.

CANTILEVERED AUTOMATIC DIMENSION DEPOSITOR

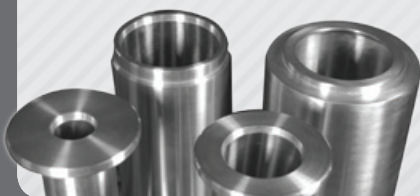

A fully adjustable in height, four across cantilevered automatic Dimension depositor suitable for mounting over pasty, pie, bakery and pizza lines. The machine can be used with any combination of heads and can deposit as a single, twin, triple and four across to suit production requirements.

The particular model shown incorporates a chequer plate top, operator hand rail and steps for easy access to the machine hopper for filling and cleaning.

SINGLE DIMENSION DEPOSITOR WITH MULTI-HEAD NOZZLES

A simple yet cost effective method of multi-depositing is a single Dimension depositor. With multi-head nozzles to deposit into tray cavities in one single deposit. This is then fed via a manifold system to equal length flexible hoses, ensuring repeatable accuracies for each cavity in a tray.
(Product dependant)

Steck challenge any other depositor manufacturer to **match their performance** in terms of accuracy, air consumption and speed of cleaning. Steck will gladly take part in demonstration trials at your site and with your product with **no obligation**. Just call to find out how Steck technology will improve both your production and profitability.

MULTI-HEAD MACHINES

STECK HAVE DEVELOPED A RANGE OF MULTI - HEAD
DIMENSION DEPOSITORS TO SUIT VARIOUS CONVEYOR LAYOUTS

SEQUENCING HEAD DEPOSITOR

To achieve multi deposits with the utmost accuracy Steck have developed the sequencing head depositor. For depositing over pie lines, dessert lines, bakery lines, heat sealing and thermoforming machines, sequential opening nozzles and multi-cylinder versions are available to suit any configuration of platen, conveyor and die patterns.

SEMI-AUTOMATIC MULTI-POINT INJECTION MACHINE

A semi-automatic multi-point injection machine for injecting cakes with chocolate, jam and lemon. Comprising two Steck Dimension depositors fitted with high pressure rotary valves which feed two heavy duty pin-less rise and fall nozzles each carrying an injection distribution plate. In each distribution plate removable capsules contain three injection needles. Both plates together cover the dimensions of a baking tray.

A semi-automatic, fully guarded, baking tray line complete with tray sensors and gate for the manual loading of baking trays. When moved into the depositing injection area, the depositors automatically deposit and inject the product into all cakes in one operation. Once a tray of cakes has been injected with product the next tray into the depositing area pushes the deposited tray into the out-feed section ready for manual loading into racks.
